

SO WHAT POSTGRAPHILE AND WHY AM I EXCITED ABOUT IT?

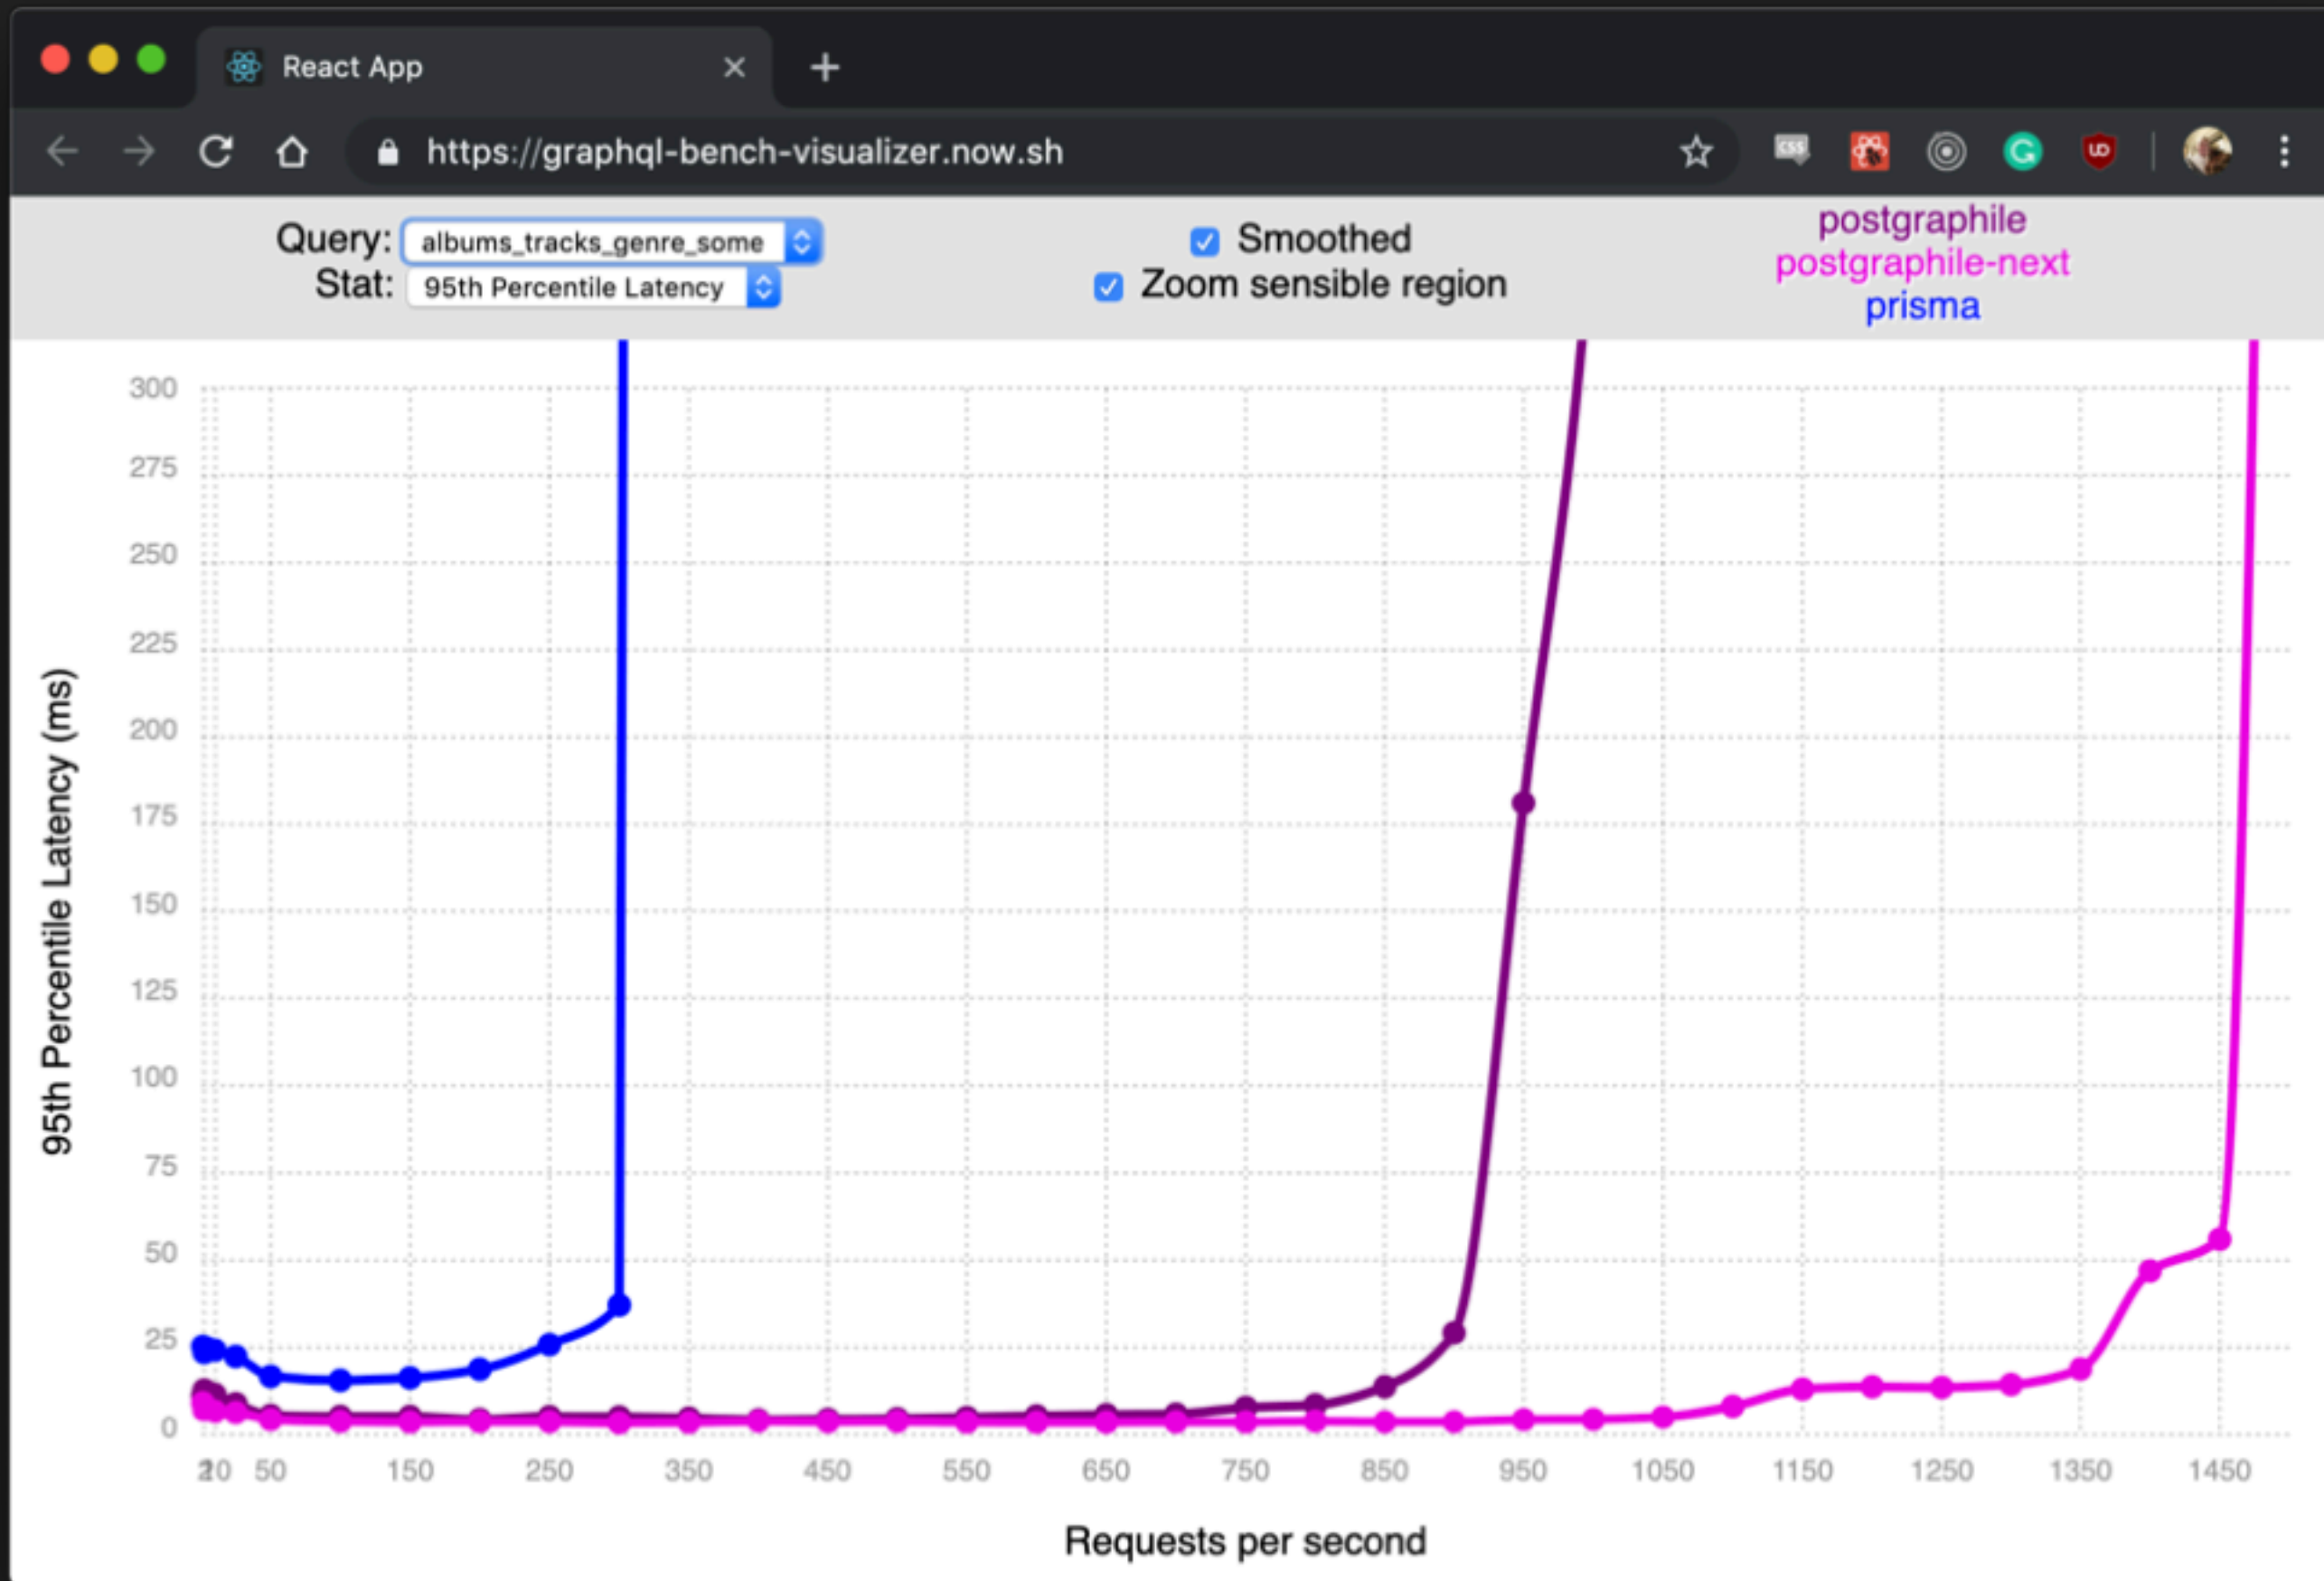

- ▶ It automatically creates an GraphQL api from your database schemas

Try it now:

```
npx postgraphile -c my_db --watch
```

requires Node.js 8.6 or higher

- ▶ Its really fast, and allows you to utilise lots of Postgres's features
- ▶ If you outgrow it or need more flexibility down the line it's easy to replace with something custom, or create a plugin
