THANK YOU FOR
THE STICKERS

@BENJIE

@JEMGILLAM

@THOMASANKCORN

SO WHAT POSTGRAPHILE AND WHY AM I EXCITED ABOUT IT?

▸ It automatically creates an GraphQL api from your database schemas

Try it now:

`npx postgraphile -c my_db --watch`

requires Node.js 8.6 or higher

▸ Its really fast, and allows you to utilise lots of Postgres's features

▸ If you outgrow it or need more flexibility down the line it's easy to replace with something custom, or create a plugin

@THOMASANKCORN
